

# TAKE BLUETECH TO NEW DEPTHS

## JOIN US FOR A PROFESSIONAL DEVELOPMENT WORKSHOP

Hosted at University of Memphis  
Dates December or January (TBD)

[Register Your Interest Here](#)

Workshop participants build and take home a remotely operated vehicle (ROV) kit, tools, and experience to help prepare a student team for the MATE ROV Competition. Our marine technology workshop features review of simple circuits, switches and soldering of electrical component parts and circuit boards, frame building of submersible vehicles, and test piloting. ROV kits and tools are provided to help educate youth and communities on how to build a sustainable future through environmental education. Sponsored by our partners at Tennessee Valley Robotics!
